## Operative Report

Report Status: Unsigned

### OPERATIVE REPORT

NAME: BENITEZ, FLAVIA D UNIT NO: 371-95-05

DATE: 01/27/2000 FLOOR: TROR

SURGEON: CARLOS FERNANDEZ-DEL CASTILLO, M.D.

ASST:

PREOPERATIVE DIAGNOSIS: LIPOMA OF THE BACK; SKIN TAG OVER THE THIGH;  
 HYPERTROPHIC SCAR OF THE LOWER ABDOMEN.

### POSTOPERATIVE DIAGNOSIS:

NAME OF OPERATION: EXCISION OF 2-CM LIPOMA OF THE BACK; EXCISION OF  
 HYPERTROPHIC SCAR IN THE LOWER MIDLINE; SKIN TAG REMOVAL.

DESCRIPTION OF PROCEDURE: The patient was placed in the prone position. A transverse incision was made over the palpable lipoma in the upper back and taken down through subcutaneous fat. We then entered and divided the lipoma, which was quite firm. This was dissected from the surrounding fatty tissue and removed. Hemostasis was completed with electrocautery and the skin was closed with subcuticular running 4-0 Vicryl sutures and Steri-Strips. A pressure dressing was applied.

We then put the patient in the supine position and proceeded to remove the skin tag on the right thigh. This was done after infiltrating with local anesthesia. The tag was excised sharply and the wound was covered with a bandage.

Attention was then turned to the lower midline, where part of her cesarean section scar was hypertrophic and very tender. This segment of the scar, which measured about 2.5 cm, was removed with a wedge incision. Hemostasis was accomplished with electrocautery and the defect was closed with separate stitches of 4-0 nylon sutures. A dry, sterile dressing was applied.

CARLOS FERNANDEZ-DEL CASTILLO,  
 M.D.
